NOTICE OF VIOLATION

Dear Mr. Harland:

On November 21, 1986, the Department conducted an inspection of Intel Corporation's facility located on Beaverton-Hillsdale highway in Aloha, Oregon. This facility was inspected for compliance with the hazardous waste generator requirements of Oregon Administrative Rules (OAR) 340, Division 102, which incorporates provisions of the federal regulations pertaining to the management of hazardous wastes. Enclosed is a copy of the inspection report made as a result of the inspection. [The Department would appreciate receiving any comments or corrections to the report.]

We need to work on changing this policy so we don't do it

During the inspection, two violations of the hazardous waste management regulations were noted:

- 1) 40 CFR 262.34(a)(3) in that on November 21, 1986, four tanks containing waste hydrofluoric acid, a D002 characteristic hazardous waste, were observed as not being properly marked with the words "Hazardous Waste"; and
- 2) 40 CFR 262.34(a)(3) in that on November 21, 1986, two tanks containing spent solvent (xylene and acetone), a D001 characteristic waste and an F003 listed waste, were observed as not being properly marked with the words "Hazardous Waste".

It is our understanding that the proper labels, indicating that the contents of the respective tanks are hazardous wastes, have been placed on or near the tanks in question. This action has resolved the violations noted in this letter. However, Intel should document compliance with these labeling requirements within 30 days of receipt of this letter. Please note that the failure to correct the aforementioned violations or to comply with the requirements of this Notice of Violation can result in additional enforcement action including the assessment of monetary penalties.

John Harland, Intel Corporation, Aloha
